

**KEEP YOUR EMPLOYEES HEALTHY
THE SAFE WAY**

A Safer Office Building

Maintaining a healthy building for your customers and staff will provide peace of mind and a safer environment for everyone. Make sure that you're both cleaning and disinfecting in order to provide the most protection. Cleaning removes dirt and soil, while disinfecting is the process of using a registered chemical to kill viruses.

It's also important to remember that disinfecting once is not enough. Viruses can be reintroduced to your workspace by a contaminated person. Having a regular cleaning and disinfecting schedule provides the best protection for your staff, customers and business.
